- 2. P100/1664G/21 – Kahuhi Peter**
- 3. P100/1584G/21 – Benard Njue**
- 4. P100/1639G/21 – Joy Gaicugi**
- 5. P100/1644G/21 – Jackline Mwikali**
- 6. P100/1691G/21 – Helga Oduor**

Unit Project Title: EMPLOYEE ATTENDANCE MANAGEMENT APP

Unit Project Brief Description:

The Employee Attendance Management App is a mobile solution designed to help organizations efficiently track and manage employee attendance. The app offers a user-friendly interface for employees to check in and out using mobile devices, optionally incorporating GPS location or QR code verification for authenticity. Administrators can view real-time attendance reports, monitor employee punctuality, and generate monthly attendance summaries. The app aims to reduce manual errors, streamline HR processes, and improve transparency and accountability in workforce management. It is especially beneficial for small and medium enterprises seeking a cost-effective and paperless attendance system.

Employee Attendance Management App – Detailed Project Breakdown

Number of Activities in the Project

Total Activities: 6

1. Splash Screen
2. Login Activity
3. Employee Dashboard
4. Attendance Form (Check-in/Check-out)
5. Attendance Reports (Admin)
6. Settings/Profile Management

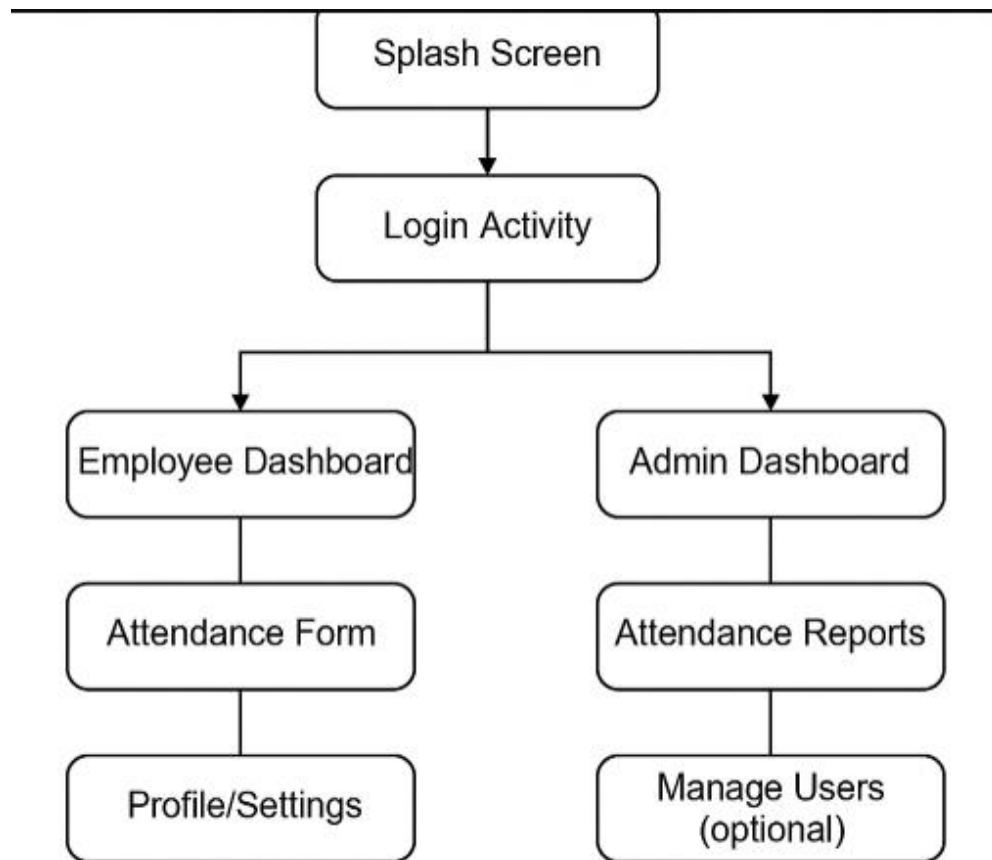

Activities That Accept Data from the User and Write to the Database (Forms)

1. Login Activity: Accepts employee ID and password
2. Attendance Form: Accepts Check-in/Check-out timestamps
3. Profile Settings: Allows updating user info such as name, email

Activities That Read Data from the Database and Display to the User (Reports)

1. Employee Dashboard: Displays today's check-in/out status
2. Attendance Reports: Admin views detailed logs by employee/date
3. Profile Management: Displays current user data

Navigation structure of your project/App

Database to Be Used: Firebase Realtime Database

Reason for Choice:

- Real-time Sync: Firebase allows real-time data sync which is perfect for tracking attendance live.
- Cross-Platform Support: Firebase integrates well with Android and iOS.
- Authentication: Built-in user authentication for secure login using email/password or phone number.
- Cloud-based: Easy access and low maintenance.
- Scalable: Suitable for small to large employee bases.
